Topic: Multiply Two Numbers Without Using the * Operator

Algorithm

1. Start
2. Declare num1, num2, prod, index.
3. Input num1 and num2.
4. Set prod=0, index=1.
5. While index $\leq$ num2:
 prod = prod + num1
 index = index + 1
6. Print prod.
7. Stop.

Flowchart (Text)

Start → Input → Initialize → Check $\text{index} \leq \text{num2}$? → Yes: Add num1 to prod, increment index, repeat → No: Print prod → Stop

Pseudocode

```
BEGIN
READ num1,num2
prod←0; index←1
WHILE index≤num2 DO
prod←prod+num1
index←index+1
END WHILE
PRINT prod
END
```

Examples

num1	num2	Result
5	4	20
7	3	21
9	6	54
